

## Scenario 1 (my situation)

New salt blocks placed in.

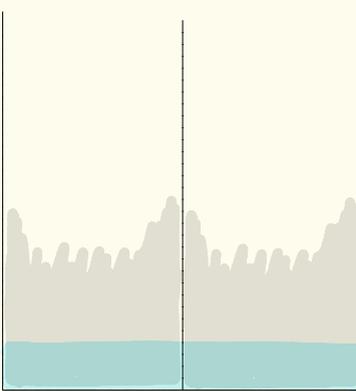

After a  
→  
few days

Salt dissolves sideways  
Result: less salt in water  
as you can see above  
resulting in hard  
water in shower, etc.

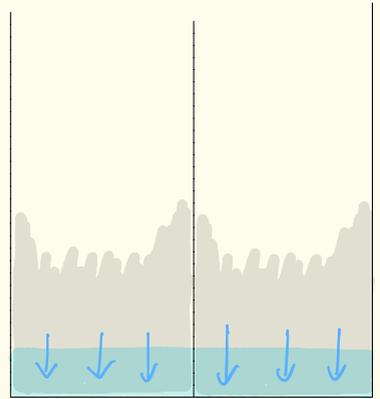

---

## Scenario 2 (what should happen)

New salt blocks placed in.

After a  
→  
few days

salt dissolves downwards  
Result: whole end of block  
salt is submerged  
providing consistent  
and full salt  
content in water.
