

The new PIR is wired to zone 6  
This is the error message

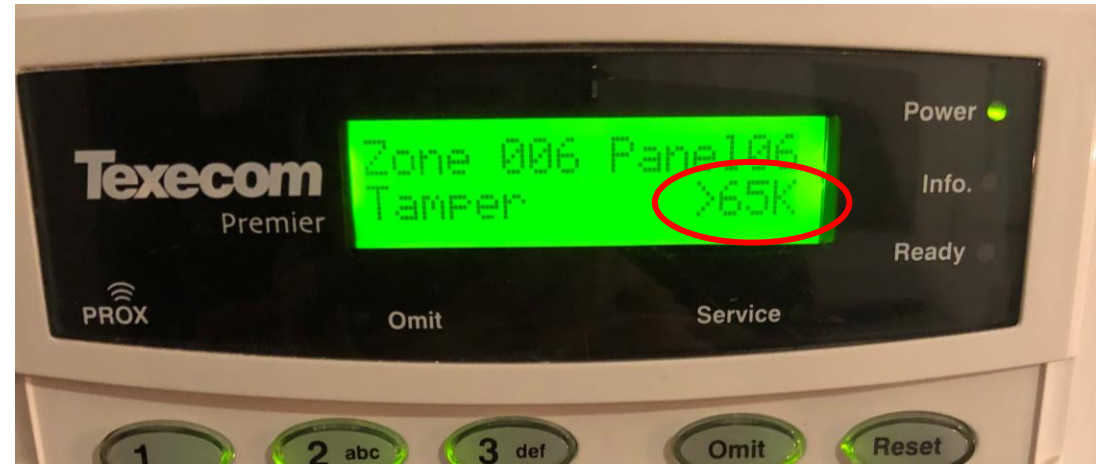

This screen shows how it is configured

This screen shows how it is configured

This shows the resistance values on a working zone

However this is what the problematic new zone is showing

Red wire to Tamper

White wire to 0v

Green wire to 12v

Black wire to Alarm

This page shows how the PIR is connected. The colours may be incorrect but I followed the colours used for the other PIRs (not shown on the circuit board)
